

ActiMaris®

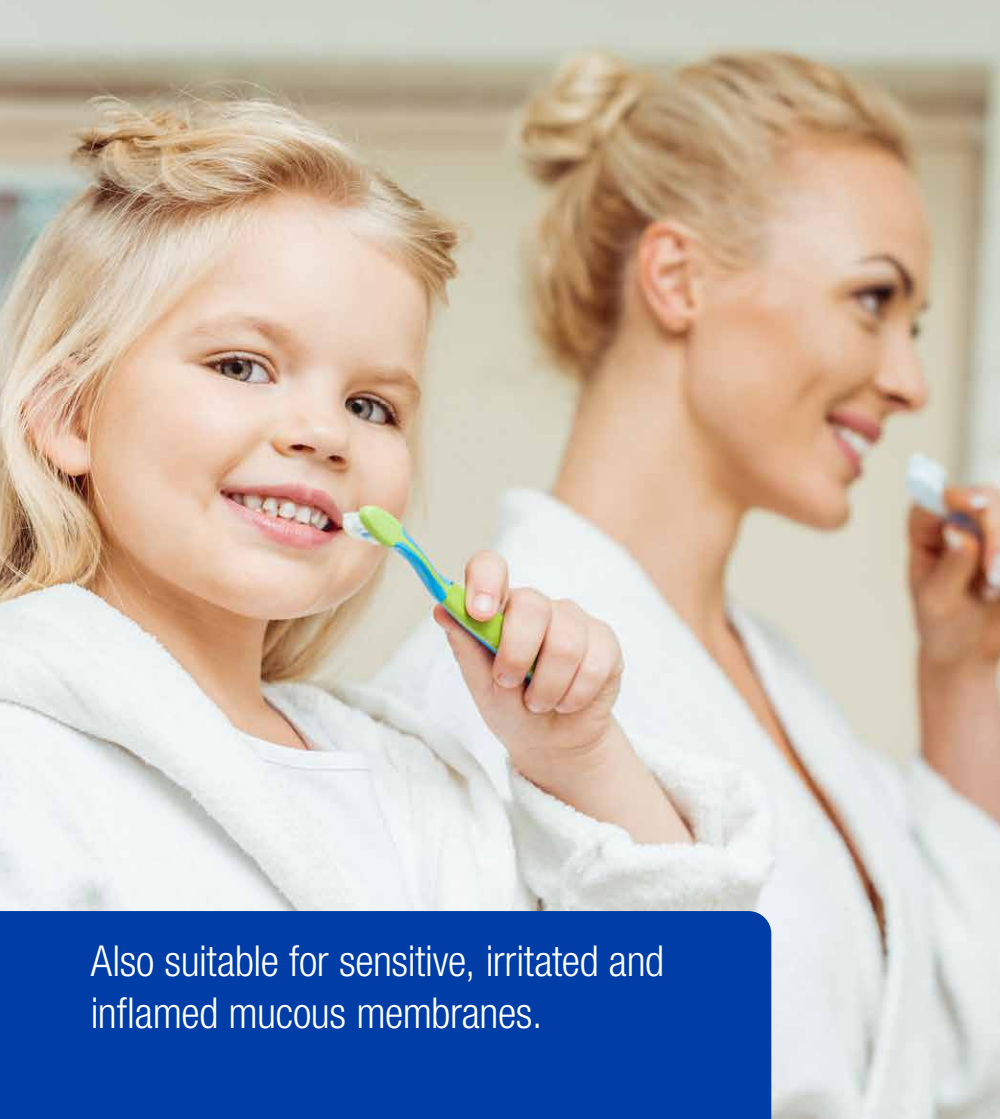

☑ Natural Health Care

Dental prophylaxis and therapy with ActiMaris® products

EN

Medical devices on a purely bio-physical
basis for use in stomatology

Also suitable for sensitive, irritated and inflamed mucous membranes.

Areas of application

Cleans, rinses, humidifies and has an antimicrobial effect for:

- inflammatory and infectious processes in the oral cavity and dental area
- the prevention of dental caries and periodontitis
- during and after oral surgery

Benefits of use

- Natural product without any additives or preservatives
- Eliminates bad breath (halitosis)
- Can be used efficiently as a monotherapy
- Suitable for use in all patient groups without limitation (e.g. pregnant women, children, allergy sufferers, diabetics, etc.)
- Does not affect taste or cause discolouration, even when used for long periods
- Can be combined with all toothpastes
- Can be used indefinitely and repeatedly
- Non-cytotoxic and not irritating
- Effective decolonisation of bacteria and fungi (MRSA & VRE)
- No resistance development
- No contraindication for use
- Effective, deep, and lasting impact
- Incredibly cost effective

All constituents are based on natural and bio-physical ingredients.

ActiMaris® products have a wide range of applications in oral surgery, stomatology and for the prevention of caries and periodontitis. Our products are highly suitable for all types of wounds and for inflammations and irritations of the mucous membrane. Additionally, these products have excellent tissue compatibility and biocompatibility. ActiMaris® products effectively eliminate odours and plaque build-up on the teeth and tongue. Can be used up to 3 months after opening.

ActiMaris® forte – Wound irrigation solution

(pH value 9.5, NaOCl 0.2 %, sea salt 3.0 %)

The wound irrigation solution has an excellent effect on tissue surfaces, biofilms and areas that are otherwise hard to reach. It is especially effective in the treatment of heavily infected, inflamed and foul-smelling wounds. It is suitable for rinsing and decolonising gingival pockets, periodontal pockets and root canals. Can be used to treat gingivitis, periodontitis and stomatitis (aphthae). Can be used after scaling and for the post-operative treatment of surgical and periodontal procedures.

ActiMaris® sensitive – Wound irrigation solution

(pH value 8.5, NaOCl 0.04 %, HOCl 0.004 %, sea salt 1.2 %)

This product is suitable for professional rinsing of the gingival pockets and the reduction of germs in the oral cavity before professional teeth cleaning. Can also be used after dental procedures and to regularly rinse the mouth after brushing teeth, as part of overall oral hygiene.

ActiMaris® Wound gel

(pH value 9.5, NaOCl 0.2 %, sea salt 3.0 %, lithium magnesium sodium silicate)

ActiMaris® wound gel is ideally suited for the local treatment of inflammations on the mucous membrane. It is highly suitable as a wound filler and as treatment for gingivitis and periodontitis. When used regularly, ActiMaris® wound gel is effective in preventing caries (strong bactericidal effect against Streptococcus mutans). The ActiMaris® wound gel has a whitening effect on the teeth without causing any damage.

FORTE

300 ml / Art. no.: 30350

1000 ml / Art. no.: 31050

SENSITIVE

300 ml / Art. no.: 30300

1000 ml / Art. no.: 31000

ActiMaris® Complex in comparison

Chlorhexidine digluconate is the most commonly used product in dentistry to date.

Chlorhexidine digluconate

- Brownish deposits on the teeth and tongue
- Delayed wound healing
- Incompatibility with a variety of toothpastes (triclosan)
- Distortion of the sense of taste
- Risk of allergic reactions and anaphylaxis
- Formation of bacterial resistances

ActiMaris® Complex

- Rapid and broad antimicrobial effect
- Effective against biofilms
- Supports the wound healing process
- Does not create resistant bacteria
- Teeth whitening effect
- Can be used in combination with all toothpastes
- No distortion of the sense of taste
